This is just an extension of the Keymacro main idea: they allow you to create macros with your favorite keys. KeyboardMacro is a small application that adds a few customization options to the usual Windows 7 keyboard shortcuts. You can define the new shortcuts, or you can modify the old ones. If you prefer the customizations on a group-by-group basis, the tool allows you to choose the control and option keys individually. The menu is organized in six submenus, divided by function. It includes a selection of items grouped by category, so you don't have to scroll through the options to find what you want. To begin, you have to open the "Shortcuts" submenu. In here, you can choose the shortcut keys you want to use for the macros you're creating. Next, the "New shortcuts" button appears, where you can add or remove the new keyboard shortcuts for your menu. If you are going to modify an existing shortcut, just click on its entry in the main window, and you'll find the "Edit" option in the menu bar. You can also set the shortcut to repeat a given time interval, which is probably the most useful feature. You can use the most common modifiers, such as Alt+A or Ctrl+A, to control the shortcuts in the program. The shortcuts can also be linked to one of the custom services installed on the PC. The "Shortcuts of " menu item, when activated, will show all the shortcuts that have been created in this program. In the "Settings" tab, you can change the configuration parameters of the program. Here, you can specify the target keyboard layout and the key combination that will trigger the shortcut. You can also change the shortcut behavior, so you can make the functions optional or repeat a set number of times. If you install the program, you will be able to select the "New shortcuts" from the Settings menu when you want to define new shortcuts.
